The Event is a private event, entering and staying there is possible only with a valid wristband. The wristband(s) are for specific day(s) and entitle only one person to enter. The wristband equipped with a unique identifier will be issued by Organiser after ticket validation.

1.1. exchange of ticket to wristband and onsite check-in

From 30th July 2019, Act CXXXIII of 2005 on Security Services and the Activities of Private Investigators (“Szvtv.”) mandatorily obliges Organiser to record the below mentioned personal data of the natural person (hereinafter: “**Visitor**”) who intends to enter a mass event – thereby also the Event - with an entry ticket. Pursuant to the Visitor Policy, children under the age of 10 are not required to have a ticket, therefore, they are not affected by the data recording.

The data recording may take place

- within the frameworks of a preliminary recording (on sites communicated by Organiser in advance) (hereinafter “**preliminary recording**”) or
- during the Event at its venue (hereinafter “**onsite recording/check-in**”) (collectively: “**check-in**”).

Providing the personal data is obligatory. The process takes a little time, but in lack of it, the Visitor is not entitled to enter the Event.

Organiser does not scan the document that contains your facial image being appropriate for identifying you (with the content of the personal data required under Szvtv. 72/C.§ (2)), only reads out the data required by law from it and pastes them by means of a scanner or mobile device or enters manually data that are missing or cannot be recognized with the help of its colleagues, as well as records the facial image of the Visitor exclusively as a cut-out image made from that part of the document that contains this data! Neither the scanner, nor the mobile device (the application used thereon) allows to make print screens during the read-

out or the data entry (making a print screen is logically, software-wise prohibited on the devices)!

After completing the check-in process, the tickets purchased are exchanged to wristband (rendering tickets to wristbands): entry to the Event area is possible bearing valid wristband, which is checked so that our colleagues visually compare the facial image of the person recorded during the check-in with the face of the person waiting to enter, as well as check the validity of the wristband (only log data is generated).

Purpose of data processing	The purpose determined in Szvtv. 72/C.§ (1): Providing the personal safety of natural persons entering the mass event (i.e. the Event), the effective prevention and detection of crimes – in particular terrorist activities – in particular proving the crimes committed at the mass event, identifying and catching persons wanted.

ELECTRONIC SURVEILLANCE SYSTEM

Organiser installs surveillance and other fixed observation camera systems (i.e. electronic observation systems, cameras) for security at the Event area. The camera system provides direct (live) and fixed surveillance. The camera system is installed for the purpose of monitoring larger hubs, entry points and cash desks.

The camera surveillance systems are operated in accordance with the provisions of the effective legislation, therefore they are operated in accordance with Act CXXXIII of 2005 on the rules of personal and property protection activities and private investigation and only record footage of events taking place in private areas or areas temporarily taken into private use (without recording sound), and they operate 0-24.

The cameras of the surveillance systems are not the same the Event cameras, you can read more of the latter below.

By entering the venue of the Event, the data subject acknowledges that pictures are taken of him or her and videos are recorded about her or him. Pictogram, and also the Privacy Notice at the venue draws attention to the placement of the cameras. We indicate the place of the cameras on a map which is available at the venue. The detailed rules of the camera system is governed by the non-public policy regarding the camera system performing area surveillance and property protection tasks for Organiser

Direct surveillance takes place in all cases via the operative control centre established at the Event concerned and that is continuously guarded around the clock, which may be entered by authorised persons only. The dedicated colleagues of the security service provider at the Event are also present at the leadpoints, may give instructions to move cameras that are suitable therefor. During the Event, Organiser stores the footage at the location of the Event in local servers that are independent of all other systems and are located in a closed, continuously (0-24) guarded area. After the closing of a given Event, Organiser stores the footage at its registered office, in a closed and guarded server room, in accordance with the foregoing, until the data is deleted.

The cameras are connected to the optical network installed by the IT Department of Organiser, in which network they are connected to a separate dedicated VLAN. This VLAN has no internet or other traffic, its only purpose is to enable communication between the cameras and the servers. The VLAN contains devices with static IP addresses. Locations may be made available through the VLAN only if this is authorised by the IT Manager of Organiser This can be done by using the network management software, to which only the persons responsible for operating the network have access. In the Operative Control Centre, the recording, surveillance and management takes place via the IvMS4002 software. At the display locations specified above, we display the images to the competent persons using the IvMS4002 software. The footage and the IvMS4002 software runs on the camera servers located in the OCC. In order to protect the data, the footage is recorded on HDDs in a RAID set. The system is installed on a separate disk. The Servers are protected with passwords only known to the operators of the camera system.

The area surveillance camera system is not capable of recognising faces and license plates and has no image analytics algorithm.
